Part 1:

The current state of the internet economy and its key transformational sectors

The internet economy in action

The internet economy

encompasses economic activities driven by digital technologies, online services, and internet connectivity. This encompasses e-commerce, mobile payments, digital content, online platforms, and cloud-based services. In South-Eastern Asia, the internet economy is fueled by high smartphone adoption, urbanization, and a tech-savvy young population. It has become a key driver of economic transformation, providing financial inclusion, employment opportunities, and business expansion across the region.

Key sectors breakdown and growth drivers

E-commerce: E-commerce has transformed retail in South-Eastern Asia, with consumers shifting to digital platforms for convenience, discounts, and variety. Innovative **live commerce, video commerce, and livestream e-commerce** have further enhanced the online shopping experience by creating interactive, real-time connections between merchants and customers through engaging video streams.

Mobile payments: Mobile payment solutions are driving financial inclusion in South-Eastern Asia, particularly among unbanked populations. QR-based transactions and digital wallets have revolutionized financial management, from transferring funds to making retail purchases. Government initiatives and innovations in financial technology (fintech) have positioned digital payments as essential infrastructure, democratizing financial access on a large scale.

Food takeout and delivery services: These services have experienced a surge with urbanization and evolving lifestyles. Platforms like GrabFood and GoFood offer a diverse range of dining choices while boosting restaurant revenue. Once a convenience, these services are now an essential part of urban living.

E-hailing services: Platforms such as Grab and Gojek have become indispensable, transforming urban mobility in the region. These services not only offer convenience but have also created employment opportunities for millions of drivers and riders across the region.

Short videos and short dramas: Short-form content has rapidly emerged as a dominant force in digital entertainment, reshaping how audiences consume media. Both **short videos** (e.g., TikTok and YouTube Shorts) and **short dramas** (e.g., DramaBox and RealShark) cater to fast-paced, mobile-first users who prefer bite-sized entertainment over long-form content. Mobile streaming, social media, and shifting audience behavior in South-Eastern Asia drive their popularity.

The internet economy in action

A key distinction among internet economy sectors is their **network usage**, which encompasses coverage (payments), real-time coordination (O2O), bandwidth (e-commerce), and high data capacity (live commerce and short video), as illustrated below.

Why this matters for telecom providers?

As South-Eastern Asia's digital economy expands rapidly, telecom providers are uniquely positioned to play a pivotal role beyond connectivity by enabling e-commerce, fintech, and digital services. With rising internet penetration, mobile-first commerce, and surging demand for digital payments, telcos can leverage their infrastructure and customer base to unlock new revenue streams and drive digital transformation.

- **Internet economy growth depends on telecom infrastructure:** The rise of digital services increases the demand for high-performance connectivity, making robust telecom infrastructure essential for daily life and business operations.
- **Telecom companies play a strategic role:** Investing in network expansion allows telecom providers to move beyond utility services and become key enablers of the digital economy. Enhanced infrastructure supports current internet services and enables future innovations to drive continued economic growth across South-Eastern Asia.
- **Business adaptation is crucial:** To capitalize on the booming internet economy, telecom businesses must embrace digital transformation, leverage data-driven insights, and build strategic partnerships in the broader technology ecosystem.
- **Telecoms and the internet economy as key growth opportunity:** The strong interdependence between telecommunications and the digital economy presents a significant opportunity for regional advancement. This relationship has far-reaching implications for multiple industry sectors, community development, and broader economic progress across South-Eastern Asia.

Case studies: Leading telcos driving digital growth

Several regional operators are capitalizing on South-Eastern Asia's internet economy by moving beyond traditional connectivity.

- Launched **Singtel Dash**, a fintech platform enabling digital payments, remittances, and e-commerce transactions
- Partnered with **Grab and Gojek** for ride-hailing and e-wallet services.

- Developed **GCash**, a leading e-wallet in the Philippines that offers payments, insurance, and financial services.
- Partnering with **local startups** to provide digital business solutions for small and medium-sized enterprises (SMEs).

- Partnership with Krungthai Bank: AIS launched "Krungthai NEXT x mPAY", integrating telco and banking services to enable mobile payments and financial transactions.

Telecom providers are no longer just infrastructure providers—they are strategic enablers of South-Eastern Asia's internet economy.

Part 2: Mapping South-Eastern Asia's digital surge: A guide to market selection

Mapping South-Eastern Asia’s digital surge: Strategic market selection

To identify the high-growth markets in South-Eastern Asia, Omdia utilized the FT-Omdia Digital Economies Index 2023, developed in collaboration with the *Financial Times*, to evaluate the digital performance of the world’s top digital economies from 2023 to 2027. This index serves as a key benchmark for technological progress and digital innovation potential, offering in-depth insights into the digital infrastructure of 51 leading economies.

Among the top 10 economies, the four South-Eastern Asian nations that recorded the highest year-over-year (YoY) growth rates are **Malaysia (second)**, **the Philippines (fourth)**, **Indonesia (sixth)**, and **Thailand (seventh)**. Their robust digital momentum and expansion from 2023 to 2024 have established them as pivotal forces in the region’s digital transformation:

- **Malaysia (11.5%):** A regional leader in digital infrastructure expansion, supported by government-backed digital initiatives and high information and communications technology (ICT) investment
- **Philippines (9.2%):** Rapid mobile broadband adoption and growing digital commerce accelerate the country’s digital economy
- **Indonesia (6.6%):** A thriving startup ecosystem and growing mobile penetration drive digital growth
- **Thailand (6.2%):** Expanding enterprise adoption and smart city initiatives fuel digital progress

These markets offer strong investment potential and emerging tech opportunities, reinforcing their roles as South-Eastern Asia’s key digital hubs within the FT-Omdia Digital Economies Index 2023.

Digital economy growth index from 2023–24		
Country	2023-2024 growth ranking	2023-24 growth rates (%)
India	1	27.0%
Malaysia	2	11.5%
South Africa	3	11.0%
Philippines	4	9.2%
Chile	5	8.0%
Indonesia	6	6.6%
Thailand	7	6.2%
Vietnam	8	6.1%
Colombia	9	5.7%
Ireland	10	5.5%

Country profile and deep dive

This section provides a focused analysis of four key markets—Malaysia, Indonesia, the Philippines, and Thailand—highlighting their current socio-economic status, internet penetration rate, infrastructure maturity, and economic contributions.

Country profile and deep dive

Strength and challenges of selected South-Eastern Asia countries

High-tech focus on economic growth

Strengths:

- Strong GDP per capita and high internet penetration position Malaysia as a hub for digital transformation
- Government-driven digital initiatives are attracting investments
- The digital economy accounted for 23.0% of GDP in 2022

Challenges:

- Reliance on foreign tech companies for infrastructure development
- Shortage of skilled talent in emerging tech sectors

Home to the largest digital economy startup scene

Strengths:

- A dynamic startup ecosystem attracting local and international investments
- High digital consumer engagement, particularly in e-commerce and fintech
- Government-led digital transformation initiatives supporting infrastructure growth

Challenges:

- Infrastructure gaps in rural areas hinder widespread digital access
- Digital literacy disparities
- Complex regulatory environment

High GDP growth and digital expansion

Strengths:

- One of the fastest-growing economies in South-Eastern Asia by GDP
- Large internet user base with a 73.6% penetration rate in 2024
- Steady increase in fixed broadband adoption (6.05% CAGR 2025–29).

Challenges:

- Lower GDP per capita indicates affordability constraints
- Need for enhanced network infrastructure in rural areas

The region's second-largest economy

Strengths:

- Strong ICT investment and individual digitalization initiatives
- High GDP per capita
- Benefits from e-commerce expansion, fintech adoption, and increasing internet penetration

Challenges:

- Intense competition
- Aging population affecting long-term digital workforce availability

Tapping into South-Eastern Asia’s internet economy: A trillion-dollar market awaits

Overall internet economy in gross merchandise value (GMV)

Notes: This Internet economy overview does not represent the total gross merchandise value (GMV) across all sectors. It focuses only on e-commerce, mobile payments, food takeout and delivery services, e-hailing services, and short videos and short dramas.

Source: Google, Temasek, and Bain & Company and Omdia

© 2025 Omdia

Tapping into South-Eastern Asia's internet economy: A trillion-dollar market awaits

Indonesia as the digital powerhouse

- Indonesia leads the region with a projected GMV of \$479.97m by 2029, maintaining a CAGR of 21.83% (2025–29).
- This dominance is driven by high internet penetration, a large population, and a thriving startup ecosystem (e.g., Gojek, Tokopedia, and Bukalapak). Government initiatives supporting digitalization and fintech expansion further fuel this growth.

Malaysia exhibits the fastest digital growth, but scale remains a challenge

- Malaysia has the highest CAGR (29.58%), driven by strong policies, broadband penetration, and SME participation.
- However, its internet economy will remain smaller than those of Thailand and the Philippines, owing to its smaller population. Sustaining growth will require the MyDIGITAL initiative, along with a shift toward high-value digital services.

Thailand's strong growth is driven by scale and digital expansion

- Thailand's internet economy is one of the most significant in South-Eastern Asia, driven by a 26.25% CAGR in e-commerce, fintech, and digital engagement. Government-backed digital transformation and infrastructure upgrades further strengthen its leadership.

Philippines is a rapidly emerging digital powerhouse

- With one of the largest populations in South-Eastern Asia, the Philippines has a vast consumer base fueling digital growth. A 20.48% CAGR reflects strong expansion in mobile commerce, remittances, and fintech.
- The country's young, tech-savvy population and rising internet penetration position it to surpass Malaysia in total internet economy value.

Part 3:

The internet economy ecosystem

South-Eastern Asia's digital boom: GMV growth across key internet economy sectors

- E-commerce led the region's internet economy, growing from **\$93.9bn in 2021** to **\$124.9bn in 2024**. Indonesia held the largest share, followed by Thailand and the Philippines.
- Mobile payments showed the fastest growth, nearly tripling to **\$162.7bn in 2024**, driven by rapid adoption in Malaysia and Indonesia.
- Services like food takeout and delivery, as well as e-hailing, continued to grow, driven by increasing consumer adoption. GMV for food takeout and delivery services rose from **\$11.2bn in 2021** to **\$14.6bn in 2024**, reflecting sustained demand for online food services. Similarly, e-hailing GMV jumped from **\$4.7bn in 2021** to **\$8.9bn in 2024**, fueled by urban mobility needs.
- Short videos and short dramas saw **exponential growth from \$0.27bn to \$0.84bn**, highlighting the increase in digital entertainment demand, particularly in the Philippines and Indonesia.

South-Eastern Asia's internet economy growth by sector (GMV, \$bn)

E-commerce

Live commerce/video commerce is on the rise:

1 in 3

surveyed South-Eastern Asia e-commerce sellers are engaging in live commerce, according to a study conducted by Ninja Van in early 2023.

Estimated active live streamers (e-commerce only)

Around 180,000

Shopee Live and TikTok Shop dominated the market, with over 1 million registered Shopee Live users. However, active streamers were likely 180,000.

Channels used for live commerce

Notes: n=224

Market outlook: Malaysia's e-commerce market is forecast to reach \$8.09bn in 2024, up by 14.8% YoY. With 97.4% internet penetration and one of the region's highest social media usage rates (83.1%), the country relies heavily on social commerce and influencer marketing.

Competitive landscape: Omdia estimated that TikTok Shop is now the second-largest e-commerce platform by monthly visits (33.28 million), behind Shopee (50.31 million). It recorded the highest monthly active users (MAU) (16.64 million), surpassing Shopee (6.29 million), demonstrating its strong e-commerce penetration.

Opportunities: Malaysia's growing middle class, smartphone penetration, and favorable regulations attract international brands. Rapid video commerce growth boosts GMV and customer acquisition, expanding brand reach through diverse creator partnerships.

Challenges: Intense competition among local and international players, evolving consumer preferences, and logistics infrastructure gaps in certain areas.

E-commerce

E-commerce country spotlight: Indonesia

An overview of e-commerce in Indonesia

E-commerce in Indonesia: GMV and revenue, 2021–24

Estimated annual spend in consumer goods, e-commerce category, B2C FY2024 (\$bn)

Top five E-commerce platforms by monthly visits:

- **Shopee** (116.2 million)
- **Lazada** (17.95 million)
- **Tokopedia** (58.84 million)
- **Blibli.com** (22.50 million)
- **Bukalapak** (2.70 million)

Estimated monthly active users: 73.4 million

- **Shopee** (39 million)
- **Tokopedia** (20 million)
- **Blibli.com** (7.5 million)
- **Lazada** (6 million)
- **Bukalapak** (0.9 million)

E-commerce country spotlight: Indonesia

E-commerce

54%

of Indonesians participated in live shopping events to enjoy discounts and promotions.

48%

were attracted by the interactive nature of live commerce, according to the 2024 Rakuten Insights' survey.

**Estimated active live streamers
(e-commerce only)**

Around 500,000

Surveys showed that 82% of micro, small, and medium enterprises (MSMEs) preferred using Shopee Live for live selling, while TikTok Shop was a significant player before recent regulatory changes.

Channels used for live commerce

Notes: n=204

Market outlook: Indonesia's e-commerce market is projected to reach \$70.6bn in 2024, with a 59.3% penetration rate. With an average of 7 hours and 38 minutes spent online daily, consumers are increasingly relying on mobile-first shopping, social commerce, and live selling.

Competitive landscape: Indonesia banned direct e-commerce on social media in 2H23, forcing TikTok Shop to shut down. In December, TikTok acquired a 75% stake in Tokopedia through GoTo Group, re-entering the market. This merger positions Tokopedia as the second-largest e-commerce player, challenging Shopee and disrupting the dominance of Shopee and Lazada.

Opportunities: Live shopping is a growing trend that combines real-time product demonstrations with consumer engagement. **Key Opinion Leaders (KOLs)** play a crucial role, leveraging their influence and authenticity to drive sales.

Challenges: Indonesia's e-commerce sector faces high delivery costs, payment trust issues, and intense competition owing to strict regulations.

E-commerce

E-commerce country spotlight: Thailand

An overview of e-commerce in Thailand

E-commerce in Thailand: GMV and revenue, 2021–24

Estimated annual spend in consumer goods, e-commerce category, B2C FY2024 (\$bn)

Top five E-commerce platforms by monthly visits:

- Shopee (100.3 million)
- Lazada (33.91 million)
- TikTop shop (25 million)
- Advice.co.th (2.30 million)
- Kaidee (1.38 million)

Estimated monthly active users: 54.23 million

- Shopee (33.4 million)
- Lazada (11.3 million)
- TikTop Shop (8.3 million)
- Advice.co.th (0.77 million)
- Kaidee (0.46 million)

FY 2024

E-commerce country spotlight: Thailand

E-commerce

One-third (31%)

of Thai consumers actively engage in live commerce and have purchased items through live shopping **at least six times.**

Estimated active live streamers (e-commerce only)

Around 350,000

Shopee Live experienced high engagement in Thailand, with around 200,000 active sellers on Shopee Live and LazLive. Including TikTok Shop sellers, the total increased to approximately 350,000.

Channels used for live commerce

Notes: n=134

Market outlook: Thailand's e-commerce market is set to reach \$24.66bn in 2024, with a 66.9% penetration rate. Mobile-first shopping, social commerce, and live selling continue to drive growth.

Competitive landscape: Shopee leads the market with 100.3 million monthly visits, followed by Lazada (33.91 million) and TikTok Shop (25 million). TikTok Shop is rapidly expanding, challenging traditional players in the live commerce space.

Opportunities: Thailand leads in live-streaming e-commerce, with strong consumer engagement driven by KOLs. TikTok's Spark Ads featuring localized content enhance monetization, as seen with Chanon, Hello Polo, and Bubpa_Shop189. Brands should research KOLs based on local expertise and audience for optimal results.

Challenges: Thailand's e-commerce struggles with high logistics costs, fierce competition, payment risks, and regulatory uncertainties. Consumer expectations and cross-border competition increase pressure, making retention challenging.

E-commerce

E-commerce country spotlight: Philippines

An overview of e-commerce in Philippines

E-commerce in Philippines: GMV and revenue, 2021–24

Estimated annual spend in consumer goods, e-commerce category, B2C FY2024 (\$bn)

Top five E-commerce platforms by monthly visits:

- Shopee (55.16 million)
- Lazada (15.83 million)
- Carousell.ph (2.197 million)
- TikTok shop (estimated 5 million)
- Zalora (495,3444)

Estimated monthly active users: 26.30 million

- Shopee (18.4 million)
- Lazada (5.3 million)
- Carousell.ph (0.73 million)
- Tiktok shop (1.7 million)
- Zalora (165,000)

E-commerce country spotlight: Philippines

E-commerce

Rakuten Insights' survey revealed that around

one-quarter (26%)

of respondents in the Philippines made purchases through live commerce events **3 to 6 times in 2023.**

Estimated active live streamers (e-commerce only)

Around 140,000

TikTok Shop led live streaming with about 60,000 sellers, followed by Shopee (around 40,000). Lazada had much lower adoption rates.

Channels used for live commerce

Notes: n=153

Market outlook: The Philippines' e-commerce market is growing rapidly, driven by high mobile usage, social commerce, and the adoption of live selling. Mobile-first shopping and digital payments continue to shape the market.

Competitive landscape: Shopee leads with 55.16 million monthly visits, followed by Lazada (15.83 million) and TikTok Shop (around 5 million). TikTok Shop is expanding quickly, reshaping live commerce dynamics and challenging traditional platforms.

Opportunities: Live-streaming e-commerce is gaining traction, with some 140,000 active live sellers. TikTok Shop and Shopee dominate this space, offering brands new avenues for engagement and monetization.

Challenges: High logistics costs, intense competition, and evolving regulations pose challenges. Consumer expectations for seamless shopping experiences pressure platforms to innovate and retain users.

Financial inclusion through mobile payments: Banking the unbanked

Estimated mobile payment contributions in Malaysia, Indonesia, Thailand, and Philippines, 2025–29

Notes: Bubble sizes represent the total market size or contribution to the market.

Mobile payments outlook in Malaysia, Indonesia, Thailand, and Philippines

Mobile payment landscape, share (F)	Challenges	Opportunities
 - Touch’n Go (dominant with 60%) - MAE (25–30%) - GrabPay (20%) - Others (combined)	While mobile payment adoption is high, many low-income groups and rural populations still lack access to financial services. Digital payment providers need better incentives to attract these users.	A strong fintech ecosystem, widespread bank partnerships, and government initiatives, such as e-wallet incentives, can further drive adoption.
 - GoPay (55% active users) - OVO (40% active users) - Shopee (45%) - Many Indonesians concurrently use two to three different e-wallets, leading to overlapping penetration rates.	The largest unbanked population in the region , with limited financial literacy and a cash-heavy economy. Many small merchants do not support digital transactions, and a lack of infrastructure in rural areas slows mobile payment adoption.	Government-backed financial inclusion programs, the expansion of fintech services, and increasing smartphone adoption will drive the adoption of digital payments.
 - TruMoney (50% most used) - Rabbit LINE Pay (25%) - Shopee Pay (20%) - Others (combined)	Despite high digital payment adoption (80.1%), cash remains the preferred method for smaller transactions. Some merchants still prefer cash to avoid transaction fees.	Government initiatives, such as PromptPay, have accelerated digital transactions, and the adoption of QR payments is continually growing
 - Gcash (80% of mobile wallet users) - Maya (10%) - Others (e.g., GrabPay) (10%)	While digital payments are growing, a trust gap persists owing to concerns about fraud. The interoperability between mobile wallets and banks remains an issue, and many still rely on traditional cash transactions.	Gcash and PayMaya are aggressively driving adoption through cashback rewards and partnerships with merchants. Digital payments will continue growing with improved financial literacy programs.

Estimated digital storefront deliveries and rider-to-storefront ratios

					Industry standard ratio
	Digital storefronts				
2021	60,000 (FoodPanda only)	50,000 (GrabFood and FoodPanda)	130,000 (GoFood and GrabFood)	110,000 (GrabFood and FoodPanda)	1 rider per 1–3 storefronts
2022	80,000	70,000	150,000	130,000	1 rider per 2 storefronts
2023	100,000 (nationwide reach)	90,000 (rapid expansion)	170,000	150,000	1 rider per 1.5–2 storefronts
2024	110,000 (still growing)	110,000 (still growing)	180,000 (still growing)	160,000 (still growing)	1 rider per 1–2 storefronts

	Number of riders				
2021	25,000–40,000	20,000–35,000	55,000–80,000	45,000–70,000	1 rider per 1.5–3 storefronts
2022	35,000–55,000	30,000–50,000	65,000–95,000	55,000–85,000	1 rider per 2 storefronts
2023	50,000–75,000	40,000–65,000	85,000–120,000	70,000–100,000	1 rider per 1.5–2 storefronts
2024	55,000–85,000	45,000–75,000	90,000–130,000	75,000–110,000	1 rider per 1–2 storefronts

Notes: The rider-to-storefront ratio is determined by a combination of food delivery platforms, market demand, and operational factors. Major platforms like GrabFood, GoFood (Gojek), and ShopeeFood determine the ratio by monitoring order volumes, optimizing delivery times, and balancing rider income and availability.

Food takeout and delivery: Moving toward increased market penetration and operational efficiency

Food takeout and delivery in South-Eastern Asia, GMV, 2021–29

Source: Google, Temasek, and Bain & Company and Omdia

© 2025 Omdia

The largest food delivery market in South-Eastern Asia

- Food delivery app usage: **39.1% of Indonesians actively use food delivery apps.**
- Key platforms: GoFood and GrabFood dominate the market.**
- It has the largest GMV in South-Eastern Asia but lower app penetration (around 39%) compared with Malaysia and the Philippines. The market is **maturing**, but continued expansion is expected, particularly outside major metro areas.

The fastest-growing food delivery market

- Malaysia has the **highest food delivery app penetration (58.9%)**, making it an integral part of daily life. GMV reached **\$4.92bn in 2024**, with the **strongest projected growth (13.8% CAGR)**, aiming for **\$8.71bn by 2029**.
- The top food delivery services in Malaysia are **GrabFood** (market leader), **FoodPanda** (strong competitor), and **ShopeeFood** (emerging player).
- Food delivery storefronts and rider numbers have grown significantly**, driven by SME expansion.

The fastest-growing food delivery market

- Food delivery app usage: 50.3% of Filipinos actively use food delivery apps.**
- Key platforms: **GrabFood and Foodpanda** lead the market.
- The Philippines is a rapidly expanding market for food delivery, driven by **high mobile adoption and increasing urban population demand**. Strong growth is expected over the next five years, with GrabFood and Foodpanda continuing to dominate.

Thailand is a well established and growing market

- Food delivery app usage: **47.8% of Thais actively use food delivery apps.**
- Thailand has a mature food delivery market with high penetration and ongoing expansion. **The market continues to grow steadily, while GrabFood and Foodpanda maintain their dominance.**

Overview of the e-hailing services market

Headlines for the adoption and use of e-hailing services

				
Number of people using e-hailing services	9.74 million	88.3 million	14.2 million	15.6 million
YoY change in the number of e-hailing service users	+6.2% +570,000	+6.4% +5.31 million	+3.3% +450,000	+6.5% +950,000
Total annual value of e-hailing bookings (\$), (2024)	\$480m	\$43.51bn	\$1.33bn	\$750m
YoY change in market value: E-hailing bookings	+6.7% +\$30m	+7.3% +\$240m	+3.1% +\$40m	+7.1% +\$50m
Average annual value per user: E-hailing bookings (\$), (2024)	\$49.33	\$39.72	\$94.07	\$48.18

Notes: E-hailing encompasses on-demand transportation facilitated through mobile apps and online platforms. Values include the booking of rides in private vehicles. Only includes bookings that are made via online services. The figures represent estimates for the full year 2024.

Revenue and spending trends

- Despite Indonesia’s dominance in user volume, its average annual spending per user is lower **(\$39.72) compared with Thailand (\$94.07)**, which has a smaller but more lucrative market. Indonesia leads in overall revenue at \$43.51bn, significantly surpassing other markets.
- Malaysia (\$49.33) and the Philippines (\$48.18) show steady consumer spending but have opportunities for growth with premium ride offerings.

Opportunities

- Indonesia’s rapid growth provides room for more competitive entrants and new monetization models.
- Thailand’s high spending per user presents an **opportunity for premium and subscription-based ride services**.
- The Philippines’ strong CAGR indicates a rising market, especially in motorbike ride-hailing.
- Malaysia’s mature market is attractive for consolidation and the introduction of advanced mobility services, such as electric vehicle (EV) fleets and AI-powered ride optimization.

Market expansion and user growth

- The South-Eastern Asian e-hailing market is growing rapidly, **led by Indonesia, with over 88 million users** in 2024.
- Malaysia, Thailand, and the Philippines have significant but slower growth, driven by urbanization and middle-class expansion.
- The high CAGR for the Philippines (10.27%) and Indonesia (14.71%) indicates strong long-term potential for platform expansion and monetization.

Challenges

- **Regulatory hurdles**, especially for motorbike-based ride-hailing in the Philippines and Thailand, may slow growth.
- **High fuel prices and operational costs** may affect profitability in lower-income markets like Indonesia and the Philippines.
- **Increased competition from super apps (e.g., AirAsia and Maxim)** in Malaysia and Thailand may put pressure on Grab’s dominance.

Short videos and short dramas market outlook

Short videos and short dramas in South-Eastern Asia, GMV, 2021–29

Source: Google, Temasek, Bain & Company and Omdia

© 2025 Omdia

Differences between short videos and short dramas

Aspect	Short Video	Short Drama or mini drama
Definition	User- or influencer-generated bite-sized videos, often informal and engaging	Scripted and episodic storytelling designed for mobile viewing in short episodes
Platforms	TikTok, YouTube Shorts, Instagram Reels, Kwai, and Snapchat Spotlight	DramaBox, RealShark, WeTV, iQIYI, Viu, and Tencent Video
Duration	Between 15 seconds and 3 minutes	Between 1 and 10 minutes per episode
Content type	Trendy, viral content (e.g., dance, comedy, tutorials, challenges, memes, and reaction videos)	Narrative-driven stories (e.g., romance, thriller, fantasy, drama, and comedy)
Production	User-generated content (UGC), social videos	Low production costs. Use artificial intelligence-generated content (AIGC) and non-professional actors to minimise the cost of production
Target audience	Younger, mobile-first users seeking quick entertainment	Viewers who enjoy serialized storytelling but prefer shorter, binge-worthy episodes
Monetization	In-app advertisements, creator fund payouts, brand sponsorships and influencer marketing, virtual gifting and tipping, and subscription-based premium content (e.g., YouTube Channel Memberships)	Paid subscriptions for premium content, pay-per-episode or microtransactions for early access, ad-supported free viewing, product placements, and brand partnerships

Source: Omdia

Short-form content, including short videos and short dramas, has become a dominant force in digital entertainment, especially in mobile-first markets like South-Eastern Asia. The following factors contribute to the boom in short-form content in the region:

- **High mobile penetration:** Most users access content via smartphones, and they favor short, digestible formats.
- **Social media integration:** Platforms like TikTok, Instagram, and Facebook heavily promote short videos.
- **Shorter attention spans:** The modern audience prefers quick, engaging storytelling.
- **Influencer-driven consumption:** Content creators and micro-influencers drive the trend, making it highly relatable.
- **Localized storytelling:** Short dramas often utilize regional languages, cultures, and trends, making them more relatable and appealing.

Short drama competitive landscape in Indonesia, Philippines, Thailand, and Malaysia

The South-Eastern Asian entertainment market shows distinct viewing preferences across countries

Leads with local productions featuring Muslim-themed stories

Indonesia	Monthly average users	App store Revenue (\$)	ARPU

Short videos and short dramas: Market summary

Short videos and short dramas market summary in Malaysia, Indonesia, Thailand, and Philippines

	 Indonesia	 Malaysia	 Philippines	 Thailand				
Category	Short video	Short drama	Short video	Short drama	Short video	Short drama	Short video	Short drama
Market size and growth	• Largest user base (Over 110 million TikTok users, 55% CAGR in the short video market)	• Fast-growing niche in Indonesia, led by mobile-focused serials	• High penetration (80%+ of internet users on TikTok)	• Niche market (not as widespread as in Indonesia)	• Strong growth (over 49 million TikTok users, 13% quarter-on-quarter [QoQ] ad reach increase)	• Emerging market for short dramas	• Fast growth (10.2% YoY TikTok ad reach increase, 44 million TikTok users)	• Limited short drama adoption • Slow market entry
Key platforms	• TikTok and YouTube Shorts	• DramaBox, ReelShort, and Melolo (ByteDance)	• TikTok, YouTube Shorts, and Instagram Reels	• DramaBox and ReelShort (small audience)	• TikTok, YouTube Shorts, and Instagram Reels	• Melolo (ByteDance) launched in late 2024	• TikTok, YouTube Shorts, and Instagram Reels	• DramaBox and ReelShort (small presence)
Monetization	• Ads, brand sponsorships, and virtual gifts	• Freemium model: free episodes + paid fast-track, mobile bundles (e.g., Telkomsel-FlexTV)	• Ads, influencer marketing, live-stream tipping	• Freemium model, but low willingness to pay	• Ads, brand deals, and live-stream tipping	• Freemium model (free access with premium features)	• Ads, influencer sponsorships, and product promotions	• Freemium model, but very small paying audience
User engagement	• Users spend an average of 2.1 hours each day watching short videos • 66% of TikTok users are female • High social engagement	• Highly engaged audience but lower monetization per user (3% of global revenue)	• Highest TikTok penetration (72.8% of population) • More male-heavy (56%)	• Limited engagement (users prefer global short video platforms)	• Users spend an average of 1.3 hours a day on TikTok • A highly interactive platform • Music, dance, and lip-sync trends dominate	• Growing interest, but adoption remains lagging behind that of Indonesia	• Users spend an average 35 minutes per day on TikTok • High engagement in beauty/fashion content	• Users prefer watching short-form content on mainstream platforms
Short drama market	• Limited direct involvement • Mostly user-generated videos on TikTok and YouTube	• Top market for short drama apps • High downloads, but low paid conversion	• Minimal short drama adoption • Most users watch on TikTok and YouTube	• No significant market for short dramas yet	• Limited direct short drama engagement; mostly user-generated content	• Philippines expected to become a key short drama market soon	• Ads, influencer sponsorships, and product promotions	• Freemium model, but very small paying audience

Short videos and short dramas: Estimated number of internet influencers

Estimated number of internet influencers in South-Eastern Asia countries, 2024

				
Instagram (10,000–50,000 followers)	14,800	45,300	14,600	15,700
Instagram (Over 1 million followers)	355	1,000	500	600
TikTok (10,000–50,000 followers)	8,000	40,000	21,900	25,000
TikTok (Over 1 million followers)	273	1,500	700	800
YouTube (10,000–50,000 subs)	6,760	73,000	24,300	15,600
YouTube (Over 1 million subs)	117	3,000	1,200	900
Facebook (10,000–50,000 followers)	4,500	35,000	10,700	18,000
Facebook (Over 1 million followers)	244	2,500	1,300	1,100
Estimated total influencers	40,000	1,200,00	2,000,000	1,500,000

Notes: These figures reflect the latest available data (2022–2024) on social media influencer numbers in each country, and they illustrate how each nation’s influencer community is structured by size and platform.

© 2025 Omdia

Summary of the short video and short drama market in Southeast Asian countries

- 
 - Malaysia is a **strong market for short videos** but lacks significant traction for short dramas.
 - While engagement levels are high, monetization remains weak.** Businesses should **focus on ads and influencer marketing** instead of premium subscriptions.
- 
 - Indonesia remains **the most lucrative market owing to its scale.**
 - It offers **high engagement for short videos** and is a **key growth market for short dramas**, although monetization challenges exist.
 - Businesses should **leverage the influencer ecosystem** and freemium models.
- 
 - Thailand is a **strong market for short videos**, with high engagement and a **well-established influencer community.**
 - Short drama adoption remains slow, limiting monetization potential.
 - Brands should focus on **influencer-driven content and ad-based revenue** instead of premium drama subscriptions.
- 
 - The Philippines presents a **significant growth opportunity for short dramas**, with platforms like Melolo positioning for market expansion.
 - Short videos remain dominant, with monetization potential in ads and brand deals.**
 - The influencer ecosystem is a key asset for businesses.

Indonesia and the Philippines offer the best opportunities for growth, while Malaysia and Thailand require more targeted monetization strategies based on engagement trends (e.g., the number of hours spent watching short videos per day).

Part 4:

Looking forward

–The internet economy's trajectory

The internet economy in advanced economies: Trends and key drivers

Advanced economies leverage robust digital infrastructure and high connectivity to drive innovation and economic growth.

- **Hyper-connected economies:** Advanced nations lead in **5G, fiber, cloud, and AI**, making digital infrastructure a GDP driver.
- **AI-driven efficiency and automation:** Automation and digital adoption boost productivity, cut costs, and create new business models.
- **Data monetization and regulation:** Data-driven growth is balanced by **privacy frameworks** for responsible data use.
- **SME transformation:** AI, IoT, and cloud empower SMEs, enhancing their competitiveness against larger firms.

Key pillars of the internet economy in advanced economies

Recommendations for accelerating internet economy growth

Building a resilient and thriving digital ecosystem by 2030

Expanding digital monetization: South-Eastern Asia's internet economy continues to evolve with new revenue models

1. Leverage digital adoption for growth

- Increasing digital adoption across e-commerce, fintech, and online services is driving revenue expansion.
- Seamless payment solutions and AI-powered commerce are enhancing monetization.

2. Enhancing revenue models with AI and data insights

- AI-driven personalization, targeted marketing, and automated sales strategies are optimizing digital revenue.
- Subscription-based, pay-per-use, and digital asset monetization models are gaining traction.

Strengthening long-term profitability: Creating a financially resilient and scalable digital business

1. Diversifying revenue streams and optimizing costs

- Digital platforms are reducing costs through cloud adoption, automation, and AI-driven efficiency.
- Businesses are integrating multi-channel commerce, embedded fintech, and platform economies for stable growth.

2. Scaling digital transformation for sustainable expansion

- The adoption of business-to-business (B2B) digital services, cloud computing, and cybersecurity ensures long-term success.
- Expanding into non-metro markets, SME digitalization, and next-generation connectivity foster inclusive growth.

Key strategic actions for telecom operators

Enhance infrastructure

- Invest in 5G, fiber, and cloud platforms to enable digital services. Collaborate with ecosystem vendors to strengthen network capability for seamless connectivity and optimized performance.

Expand telecom-enabled e-wallets and financial services

- Develop and scale e-wallets: Strengthen adoption of telecom-led mobile wallets to drive digital transactions and financial inclusion
- Enable telco-led microfinance and buy now, pay later (BNPL) options
- Integrate Financial Products: Offer insurance, microloans, and digital banking partnerships directly via telco apps.

Diversify revenue mix: Transition from telco to techco

- Expand from connectivity to platform services. For example, monetize digital identity, fintech APIs, and super apps beyond traditional telco revenue.

Foster AI and automation

- Use AI-driven analytics, fraud detection, and intelligent commerce solutions.

Prioritize cybersecurity and data privacy

- Protect consumers and businesses with next-generation security frameworks.

Champion green digital growth

- Develop carbon-neutral data centers and energy-efficient connectivity.

Appendix

Methodology:

This eBook features data and information from Omdia’s proprietary sources, external publications, and Generative AI tools, as well as paywalled sites, such as Statista, Semrush, and Similarweb, which are used to supplement market estimates, validate traffic or usage metrics, and provide directional benchmarks where proprietary data is limited or unavailable.
